**HINES HOSPITAL**

Hines Hospital is one of the largest and most diversified medical and surgical hospitals in the Department of Veterans Affairs system. The hospital is a tertiary referral center with many specialty services including some that serve a large U.S. regional area. The Psychology Service operates as an independent department within the larger Mental Health Service Line and has good working relationships with wide-ranging medical disciplines within the hospital. The units and patient programs served by Psychology Service include Primary Care, Blind Rehabilitation, Cardiac Care, Substance Abuse Residential Rehabilitation Treatment Program, Extended Care (Geriatric), Infectious Disease, Inpatient and Outpatient Psychiatry, Intensive Care Medicine, Neurology, Oncology, Physical Medicine and Rehabilitation, Trauma Services Program, Polytrauma/TBI program, Spinal Cord Injury, and many more.

As a VA hospital, Hines gives priority to the care of Veterans whose injuries or medical conditions were obtained while in the military service of the United States. Hines is also authorized to serve all Veterans who have limited financial resources. A high proportion of our patients are from ethnic minority groups, thereby enriching the cultural atmosphere of the hospital.

The Hospital is accredited by the Joint Commission on Accreditation of Health Care Organizations (JCAHO) and the Commission on Accreditation of Rehabilitation Facilities (CARF), and has affiliations with numerous universities.

The Hospital and its academic affiliates conduct many symposia, workshops and consultant presentations on a broad range of topics from many health care fields, and these in turn are available to trainees.

**PSYCHOLOGY SERVICE**

The Psychology Service at Hines represents a health care model in keeping with the ideal set forth by the American Psychological Association, i.e., an independent clinical service directly responsible to the Chief of the Mental Health Service Line. At Hines, Psychologists are privileged providers with membership on the Medical Executive Committee.

The Psychology Service includes 47 doctoral-level psychologists. The broad range of expertise, background, and experience represented in the staff is also reflected in the diversity of their professional assignments throughout the Hospital.

Psychologists work in traditional psychiatric and rehabilitation settings, as well as in neuropsychology, family therapy, and health psychology specialties such as pain management, primary care, home-based health care, oncology, heart disease, and HIV consultation.
PROGRAM DESCRIPTION:
Hines VA Hospital offers extended twelve-month practica in one of eight clinical areas. The practicum at Hines VA Hospital begins in early July and ends in late June with the 2-day mandatory orientation on July 5th & July 6th. Practicum students are expected to complete 700+ hours within this time frame. Furthermore, students are expected to work at least 16 hours per week, with a typical workday beginning at 8:00 a.m. and ending at 4:30 p.m. although some tracks may require alternate hours. Students will work on one track for the entire year, although exposure to different supervisors is included in some tracks.

LEAVE:
Two weeks (or the equivalent of 4 days) vacation is allotted for the 12-month practicum. Vacation requests should be made to the trainee’s direct supervisor at least two weeks in advance, although further notice is preferable. Special accommodations may be made for those going on internship interviews or other unique circumstances. Trainees are encouraged to discuss this directly with their supervisors. Two weeks (the equivalent of 4 days) of sick leave is allotted for the 12-month practicum. If trainees take all vacation and sick leave, then this leaves 48 weeks of clinical training time, or 768 hours. A minimum of 768 hours is expected; additional time off must be made up.

Any extended sick leave (beyond 1 week) must be accompanied by a doctor’s explanation. Trainees are required to call their supervisors directly if they are late or need to use sick leave. Excessive tardiness and/or absences are unacceptable and may mean that a practicum would be considered incomplete. In these cases, consideration of special arrangements and/or termination of the practicum would have to be discussed between Hines VA Hospital and a trainee’s academic program. Trainees are expected to track their own leave (sick and vacation) days and plan accordingly if additional days will need to be made up.

During their practicum experience, trainees will be closely supervised by a doctoral-level psychologist with a specialty in that particular track. A minimum of one hour of formal individual supervision will be provided by all tracks. However, additional supervision, consultation, and didactic activities are available for most tracks and are training-area specific (e.g., neuropsychology grand rounds, integrated care grand rounds, etc.). Because Hines VA Hospital also has an APA-approved internship program consisting of seven intern slots, we are very familiar with providing excellence in training. We also offer a post-doctoral program with six specific specialties. Toward this end, we stress education, supervision, and training. Trainees are not treated as technicians. Practicum will allow trainees to apply classroom theory in a practical setting to develop greater confidence in their clinical skills, and to mature as professional psychologists.

ELIGIBILITY:

1. U.S. citizenship. VA is unable to consider applications from anyone who is not currently a U.S. citizen.

2. Trainees are subject to fingerprinting and background checks.
3. Doctoral student in good standing at an American Psychological Association (APA) or Canadian Psychological Association (CPA) accredited graduate program in Clinical, Counseling, or Combined psychology or Psychological Clinical Science Accreditation System (PCSAS) accredited program in Clinical Science. Persons with a doctorate in another area of psychology who meet the APA or CPA criteria for respecialization training in Clinical, Counseling, or Combined Psychology are also eligible.

SUPPORT/CHAIN OF COMMAND:

It is expected that trainees will raise any concerns they may have (about professional, clinical, or personal issues relevant to practicum work) with their direct Hines VA supervisor. In the case that one would like to raise any issue with someone other than their Hines VA supervisor, trainees may approach Dr. Rene Pichler-Mowry (Practicum Coordinator) or Dr. Katherine Meyers (Assistant Practicum Coordinator) for assistance. If needed, other options for assistance (higher in the chain of command) include Dr. Hawk (Director of Training, Hines VA Psychology) and Dr. O’Donnell (Chief of Psychology, Hines VA Psychology).
AVAILABLE PRACTICUM TRACKS:

___ Community-Based Outpatient Clinic (CBOC) Psychotherapy Track  
(Therapy Only) 
  Dr. Kanukollu (1 student per year)

___ Neuropsychological Assessment Track (Assessment Only): 
  Dr. Kinsinger, Dr. Riordan, Dr. Urban, and Dr. Wiley (4 students per year)

___ Primary Care/Behavioral Health Integration (Therapy and a combination of 
  Formal & Informal Assessment): 
  Dr. Birnholz, Dr. Davis, Dr. Horn, Dr. Mathews, Dr. Meyers, Dr. Robertson, 
  and Dr. Zerth (1-2 students per year)

___ Psychosocial Rehabilitation and Recovery Center & Skills Training in Affect 
  & Interpersonal Regulation Skills Training in Affect & Interpersonal 
  Regulation (STAIR)/Bridge Services Track (Therapy and Minimal 
  Assessment): 
  Dr. Cano and Dr. Garcia (1-2 student per year)

___ Spinal Cord Injury Program (Therapy and Minimal Assessment): 
  Dr. Cornick, Dr. Rubinshteyn and Dr. Ghaffari (1-2 student per year)

___ Substance Abuse Residential Rehabilitation Treatment Program (Mixed 
  Therapy and Assessment): 
  Dr. Singh (1 student per year)

___ TBI/Polytrauma Outpatient Clinic (Therapy and Minimal Assessment): 
  Dr. Pichler-Mowry & Dr. Hessinger (2 students per year)

___ Trauma Services Program (Mixed Therapy and Assessment): 
  Dr. Beyer, Dr. Colangelo, Dr. Noblett, and Dr. Pamp (3-4 students per 
  year)
DESCRIPTION OF PRACTICUM TRACKS:

1. COMMUNITY-BASED OUTPATIENT CLINIC (CBOC) PSYCHOTHERAPY TRACK
   (This practicum track will take place solely at the Oak Lawn CBOC: 10201 S. Cicero Avenue, Oak Lawn, IL 60453. However, some initial Human Resources paperwork/fingerprinting will likely be required at the Hines VA Hospital. This track is limited to Mondays & Thursdays)

   **Supervisor: Shanta Kanukollu, Ph.D.**

Trainees on this track will have the opportunity to provide individual and group evidence-based psychotherapy in an outpatient setting. The clinic serves a diverse population of Veterans from all eras and trainees will be exposed to a variety of presenting problems including depression, anxiety, PTSD, relationship difficulties, and anger management. Because of the nature of the CBOC, trainees can expect to treat a wide variety of presenting problems and obtain a solid foundation of outpatient psychotherapy experience. Trainees can be expected to carry a caseload of individual therapy clients and assist in running time-limited therapy groups (i.e., anger management, CBT for depression, chronic pain). Trainees will also be expected to participate in the mental health clinic orientation designed to socialize Veterans to time-limited empirically supported interventions and to assist with treatment dispositions following the orientation. Depending on the clinical interest of the trainee, there may also be limited opportunities for couples counseling and family therapy and opportunities to assist in creating new time-limited therapy groups. The clinic offers the opportunity to be part of a multidisciplinary team of a psychologist, social workers, psychiatrists, nurses, primary care physicians, and dieticians.

The practicum is 2 full days per week (16 hours total), and is limited to Mondays and Thursdays. Individual supervision and didactics are provided by a licensed clinical psychologist on a weekly basis.

This track is located at the Oak Lawn Community-Based Outpatient Clinic (CBOC). CBOCs were created by the VA to provide primary care services to individuals that may not live close to a main hospital. The Oak Lawn VA CBOC is one of 6 CBOCs associated with Hines (and the closest one to the city). Oak Lawn is a southwest suburb of Chicago, approximately 45 minutes from downtown Chicago via car. In addition, the CBOC is a 10-15-minute walk from a Metra station which provides transportation to downtown Chicago.

The Oak Lawn CBOC tends to serve a general population, and trainees will be exposed to a variety of presenting problems. Experience in a community-based clinic at the trainee level would be beneficial for a student interested in pursuing future opportunities at a community mental health care clinic (CMHC), a private practice setting, or a VA hospital. Please note that apart from very occasional trainings or meetings this track is located entirely at the Oak Lawn CBOC and not at the Hines VA main hospital.
Trainees in the Community-Based Outpatient Clinic Psychotherapy track will gain experience in the following skills and activities:

1. Clinical exposure to a variety of presenting problems, including but not limited to depression, bipolar disorder, anxiety, PTSD, relationship concerns, social/adjustment issues, psychosis, Axis II conditions, and anger management.

2. Implementation of evidence-based practices for outpatient treatment (e.g., cognitive-behavioral treatment for depression, behavioral activation, Interpersonal Therapy for depression, Seeking Safety to address PTSD and substance abuse) in the individual therapy modality with possibilities of group therapy, as well.

3. Opportunities to conceptualize challenging cases from varying theoretical orientations while paying attention to how race, class, age, sexual orientation, veteran era of service and gender impact presenting concerns.

4. Writing clinically relevant and succinct notes.

5. Structuring the therapy session, setting an agenda, assigning homework, and establishing clinically relevant and appropriate treatment goals.

6. Identifying clinically relevant referrals to various programs within and outside of the VA.

7. Outreach to agencies within the community to promote relevant clinical programming (e.g., vet centers, Community Colleges, VFW Halls, etc.).

8. Reading current and relevant research related to treatment techniques.

NEUROPSYCHOLOGICAL ASSESSMENT TRACK. On this track, trainees will rotate between several supervisors, and may spend a portion of the year working with the Neuropsychology Post-Doctoral Fellow. This track is designed for an advanced trainee and/or a trainee who has a strong interest in Neuropsychology.

Supervisors: Amanda Urban, Ph.D., ABPP
Patrick Riordan, Ph.D., ABPP
David Kinsinger, Ph.D., ABPP
Anne Wiley, Ph.D.

The trainee will become familiar with the flexible-battery approach to neuropsychological assessment. This method emphasizes qualitative and quantitative data within the framework of a battery of tests which are designed to answer specific consultation questions. Trainees will receive training and experience in the provision of assessment and consultation services to
medically-based patient populations, as well as a psychiatric population. Neuropsychological services are provided in predominantly outpatient settings. Referral sources include, but are not limited to, Neurology, Psychiatry, General Medicine, Geriatrics, Physical Medicine & Rehabilitation / Polytrauma, Neurosurgery, and Psychology. Consultations are utilized by a variety of medical disciplines, including physicians, psychologists, social workers, rehabilitation specialists, and nurses for diagnostic purposes, dementia workups, future care planning, rehabilitation, and/or determination of capacity. Trainees will also become familiar with neuroimaging and lab results relevant to neurocognitive conditions. Trainees can expect to develop proficiency regarding clinical interviewing, test administration/selection, test interpretation, and test report writing. Family contact is frequent, particularly with outpatients, and education/supportive services are common. The trainee will be exposed to a wide variety of neurocognitive disorders, including but not limited to: dementias, strokes and vascular disease, traumatic brain injury/polytrauma, toxic/metabolic disorders, aphasias, amnestic syndromes, and psychiatric disturbances. Most of the patients will be either in their late 60's and 70's or in their 20's (newly returning Veterans), but ages may range from 18 to 95. Patients come from a variety of socioeconomic, racial, and ethnic backgrounds. It is a prerequisite that students have some background in neuropsychology.

Trainees in the Neuropsychology practicum will gain experience in the following skills and activities:

1. Increased familiarity with the process-oriented/flexible-battery approach to Neuropsychology

2. Exposure to a consultant model of interacting with other disciplines

3. Exposure to and basic understanding of neuroanatomy

4. Increased familiarity with a variety of neurocognitive disorders, including but not limited to: dementias, strokes and vascular disease, traumatic brain injury/polytrauma, toxic/metabolic disorders, aphasias, amnestic syndromes, and psychiatric disturbances

5. An in-depth understanding of cortical and subcortical dementias

6. An in-depth understanding of traumatic brain injury

7. Trainees will progress toward establishing their professional identity as psychologists.

3. PRIMARY CARE BEHAVIORAL HEALTH TRACK

Supervisors: Matthew Davis, Ph.D., M.P.H.
Julie Horn, Ph.D.
Jamie Mathews, Psy.D.
This practicum is 2 full days per week for 12 months and one of those days must be on a Wednesday.

The trainee will work as a member of a nationally recognized interdisciplinary Primary Care Behavioral Health (PCBH) program. The PCBH provider team includes a variety of disciplines including Psychology, Psychiatry, Social Work and Nursing as well as other trainees with diverse educational backgrounds. PCBH is focused on providing co-located collaborative and biopsychosocially-oriented mental health and behavioral medicine consultation, assessment, and intervention services within Primary Care’s “Patient Aligned Care Team” (PACT). The PACT team is comprised of a Primary Care Provider (i.e., Physician, Physician's Assistant, or Nurse Practitioner), Nursing, Medical Social Work, Pharmacy, Nutrition, and a PCBH provider. The trainee will be exposed to primary care psychology competencies with a focus on time-limited and population-focused evidence-based practice. Interdisciplinary interaction takes place via participation in PCBH team meetings, PACT huddles, and curbside and formal consultation with PACT and PCBH providers. Formal didactic opportunities are available including biweekly integrated-care grand rounds. One trainee may also elect to participate in a part-time track with the oncology service.

PCBH Psychology provides same-day, open access mental health and behavioral medicine services via consultation with primary care providers as well as targeted evaluation and brief treatment for patients with broad ranging clinical presentations such as anxiety and mood spectrum disorders, substance misuse, chronic illness, chronic pain, adjustment disorders, bereavement, attaining and maintaining healthy lifestyles, and somatic concerns. Psychology also provides behavioral and mental health group treatment for primary care and specialty clinic patients and groups are structured following empirically-based treatment protocols and emphasize adjustment to illness and management of emotional difficulties secondary to medical problems. Goals of the PCBH Team are to increase patient accessibility to mental health care and assist primary care staff with early identification and intervention of maladaptive health behaviors and mental health difficulties. On average, the typical Hines VA Primary Care clinic patient is male, over the age of 50, and ethnically diverse although Psychology also provides services to primary care's distinct Women's Health, geriatrics, infectious disease, and oncology clinics. This practicum experience primarily focuses on treatment but will include some assessment and there may be opportunities for involvement in scholarly, research-related activities as well.
Trainees in the PCBH practicum will gain experience in the following skills and activities:

1. The primary responsibility of the practicum student will be to develop and/or increase competence in providing clinical services to patients who are coping with mild to moderate mental health difficulties and/or acute or chronic medical conditions. While these skills are focused on the primary care setting or oncology settings, many of the training opportunities will prepare one to work in a variety of integrated medical settings. More specifically, trainees will develop skills in:
   
a. Conducting diagnostic interviewing aimed at assessing the full spectrum of problems/difficulties that may impact one’s physical and behavioral health including mood and anxiety disorders, difficulties with adjustment to illness, compliance issues, risk assessment, cognitive status, social support, substance use/abuse, and other subclinical symptoms.
   
b. Conducting individual and group psychotherapeutic interventions aimed at symptom reduction and increased compliance and adherence.
   
c. Developing and carrying out evidenced-based mental health and behavioral medicine treatment plans.
   
d. Developing skills in serving as a consultant-liaison to the interdisciplinary treatment team.

Other training opportunities include:

2. Developing skills in initial assessment and outcome measurement in Primary Care Psychology.

3. Deepening one’s understanding of the complex interrelationship between psychological and physical well-being.

4. Developing skills in using time efficiently and managing resources in a manner that is respectful of the fast-paced medical environment.

5. Developing psychotherapy skills that are respectful of a short-term, solution-focused, and evidenced-based practice model with a focus on functional outcomes as well as health promotion/disease prevention.

6. Increased awareness of military and Veteran culture as well as more broadly-defined cultural competency.
4. **PSYCHOSOCIAL REHABILITATION AND RECOVERY CENTER (PRRC) & SKILLS TRAINING IN AFFECT & INTERPERSONAL REGULATION (STAIR)/BRIDGE SERVICES TRACK**

**Supervisors:** Patricia Cano, Ph.D.  
Marilyn Garcia, Ph.D., C.P.R.P.

This track is designed for a trainee who has a strong interest or background in serious mental illness (SMI). Additionally, the trainee will gain experience using manualized, skills-based protocols for persistent/complex trauma symptomatology (e.g., depression, anxiety, PTSD, emotional and social/interpersonal difficulties) as well as exposure to bridge programming on inpatient psychiatry unit and with Women’s Mental Health.

Trainees will spend 2 full days (16 hours total) per week in the PRRC & Skills Training in Affect & Interpersonal Regulation (STAIR)/Bridge Services track. The PRRC is an outpatient, transitional learning center designed to support the recovery and community integration of Veterans living with SMI (e.g., Major Depressive Disorder, Bipolar Disorder, severe Posttraumatic Stress Disorder, Schizophrenia, Schizoaffective Disorder) and significant functional impairment related to their psychiatric condition. Services available through the PRRC reflect the general principles that everyone has the capacity for growth and recovery from mental illness is possible. The PRRC offers evidence-based programming, delivered primarily in classroom format, aimed at teaching the requisite skills for realizing Veterans’ self-chosen goals in various domains of life. The trainee will work alongside an interdisciplinary PRRC staff from the fields of Psychology, Social Work, and Peer Support, who collaborate closely with other providers in Psychiatry, Nursing, Mental Health Intensive Case Management (MHICM), Compensated Work Therapy (CWT), and other healthcare areas, to create a unified treatment team approach to recovery. Additionally, the PRRC provides training experiences to interns in the Psychology pre-doctoral and Social Work master’s programs who also function as integral members of the PRRC team.

The PRRC population consists of a diverse group of male and female Veterans of various service eras, ranging in age from early 20s to early 90s, although predominantly male between 51 to 60 years of age. Besides having a primary SMI diagnosis, individuals referred to the program present with a wide range of co-morbid medical and psychiatric issues, including chronic passive and/or active suicidal ideation, past suicide attempts and inpatient psychiatric hospitalizations, substance use disorders, and military/non-military trauma histories. Common psychosocial challenges found among this population are long-standing employment problems, unstable housing, limited social support, emotional and relationship difficulties, poor coping, and non-adherence to treatment.

While on the PRRC & Skills Training in Affect & Interpersonal Regulation (STAIR)/Bridge Services track, the trainee will become familiar with the various rehabilitation and recovery resources available to participants in the program via education, skills training, Peer Support, community linkage, and the coordination
of services with other VA providers. The trainee can expect to be involved in all aspects of the PRRC enrollment process, following a referral from the initial contact and program introduction to the intake assessment and completion of symptom/baseline measurement. The trainee will carry a small caseload of 2-4 Veterans (PRRC and STAIR) and have the opportunity to assist PRRC participants with individualized recovery planning and treatment for their identification and attainment of goals related to improved socialization, understanding and coping with symptoms, wellness management, support utilization, work/school functioning, independent living, and community involvement. Additionally, the trainee will gain exposure to psychoeducational and skills-based classes in the PRRC, such as orientation classes on the fundamentals of recovery from mental illness and evidenced-based classes for SMI and persistent/complex trauma. As Inpatient Psychiatry is a major PRRC referral source, the trainee will be able to participate in “warm handoffs” by providing education on PRRC services to Veterans on the inpatient unit and facilitate/co-facilitate one to two weekly bridge groups. The trainee will also be exposed to other bridge programming available in collaboration with Women’s Mental Health and other recovery-oriented services.

**Primary Goals:**
Trainees in the PRRC & S Skills Training in Affect & Interpersonal Regulation (STAIR)/Bridge Services track will gain experience and skills in the following areas:

1. The mental health recovery model, basic recovery components, and core principles and values of psychosocial rehabilitation.

2. SMI diagnoses and various co-occurring conditions and psychosocial issues.

3. Diagnostic interviewing, symptom assessment, and individualized recovery planning with an outpatient SMI population in a VA setting.

4. Evidence-based programming for SMI, such as Social Skills Training (SST), Illness Management and Recovery (IMR), and Skills Training in Affective and Interpersonal Regulation (STAIR).

5. Program education to potential referrals in inpatient and outpatient mental health settings for facilitating engagement and reducing barriers to treatment.

6. Individual psychotherapy and psycho-educational/skills training classes for women Veterans as part of Skills Training in Affect & Interpersonal Regulation (STAIR)-related services/bridge programming.

7. Consultation with an interdisciplinary team of providers.

8. Involvement in local and national PRRC and STAIR-related program
evaluation efforts and treatment outcome measurement.

5. **SPINAL CORD INJURY SERVICE (SCIS) TRACK**

**Supervisors:** Courtney Cornick, Ph.D.
Azi Ghaffari, Ph.D.
Julia Rubinshteyn, Ph.D.

This practicum is 2 full days per week for 12 months.

Hines SCIS is a regional center that provides acute rehabilitation, medical and sustaining care, long-term residential care, home care, and outpatient care to Veterans with a spinal cord injury or patients receiving care in our MS clinic. The Veteran population tends to be bi-modal in age with younger Veterans acquiring traumatic injuries due to accidents, etc. and older Veterans acquiring SCI due to progressive disease or injuries related to falls, etc. The hospital-based SCIS consists of two 29-bed units with 8 of those beds committed to acutely injured individuals undergoing intensive rehabilitation. The Residential Care Facility houses 30 Veterans with spinal cord injuries and provides long-term residential care. Finally, SCI outpatients are seen for follow-up in the acute hospital setting as well as in the home-based care program. The spinal cord injury service is an interdisciplinary program focusing on medical as well as psychosocial functioning throughout the patient’s inpatient and outpatient care. Veterans present with a variety of spinal cord problems (both traumatic and non-traumatic) as well as psychological problems, which may or may not be related to their spinal cord impairment. Veterans may present with medical complications associated with their spinal cord injury, acute/chronic medical conditions that require hospitalization, or sub-acute rehabilitation. Approximately 30% have some diagnosable psychological problem; most typically present with affective disorders, cognitive impairment, and/or substance abuse. The treatment team consists of medicine, occupational therapy, physical therapy, kinesiotherapy, speech language pathology, social work, nutrition, educational therapy, recreational therapy, vocational rehabilitation, nursing, psychology, chaplain, and other specialties. The trainee will work as a member of an interdisciplinary team alongside these various disciplines. Moreover, trainees on this track will participate in weekly interdisciplinary discharge rounds, and have an option to attend weekly rounds with physicians and psychologists. The trainee will be exposed to consultation, assessment, and individual therapy. Moreover, trainees will also have the opportunity to participate in the MS Health and Wellness Group.

Trainees in the Spinal Cord Injury Service practicum will gain experience in the following skills and activities:

1. **Conducting diagnostic and comprehensive psychosocial assessments of individuals with SCI and related disorders.**
2. Evaluation and provision of evidenced-based treatment for individuals on the inpatient, outpatient and rehabilitation units. Clinical services including differential diagnoses, follow-up counseling, team consultation, and triage to specialty services (i.e., Psychiatry, Mental Health, Speech Pathology, etc.).

3. Development of professional skills relevant to working collaboratively with medical providers and interdisciplinary professionals.

4. Development of skills in assessment and treatment of various levels of psychopathology, ranging from adjustment to injury to severe psychopathology.

5. Participation in weekly interdisciplinary team meetings, as well as reading current and relevant research related to the field and relevant treatment techniques.

6. **SUBSTANCE ABUSE RESIDENTIAL REHABILITATION TREATMENT TRACK**

   **Supervisor:** Amber Singh, Ph.D.

   Trainees will be involved in various aspects of treatment provided to Veterans admitted to the Substance Abuse Residential Rehabilitation Treatment Program (SARRTP). The SARRTP provides treatment to Veterans with substance use disorders requiring a higher level of care than traditional outpatient treatment. The SARRTP has a three-week curriculum; however, actual length of stay varies dependent on clinical factors and aftercare plans. Veterans participate in intensive, primarily group, treatment drawing from CBT, Motivational Interviewing, Anger Management, Coping Skills, Seeking Safety, Relapse Prevention, and 12-step facilitation. Veterans also attend psycho-education classes daily, recreation therapy, spirituality groups, and have the opportunity to participate in an exercise program. The treatment team is interdisciplinary consisting of a psychologist, a psychiatrist, 4 social workers, 7 nurses/nursing assistants, 3 addiction specialists, recreational therapists, chaplain services, peer support specialists, a dietician, and a number of trainees (social work, psychiatry, recreation therapy, nursing).

   Veterans receiving treatment in the SARRTP come from a variety of referral sources including the Hines Psychiatric and Medical Inpatient Units (~50%), Hines outpatient substance abuse treatment programs (~10%), Hines Mental Health Intake Center (~10%), and other VA hospitals (~20%). The average age of residents is ~50 years old (range 19-83 years old). Patients have a wide range of co-occurring psychiatric disorders including depression, PTSD, and SMI. Additionally, many of the patients are at high risk for suicide (~25%).
Trainees may gain both clinical and assessment experience, with the balance of clinical/assessment driven by the trainee’s training goals. With regard to clinical experience, trainees will be involved in the intake process/interview, serve as primary counselors for residents providing individual therapy on an as needed basis, facilitate interactive group therapy, and provide group psycho-educational instruction. Trainees may also have the opportunity to be trained and deliver a 12-week evidence-based Cognitive Behavioral Therapy for Substance Use Disorders intervention. The trainees will work with SARRTP social workers in developing aftercare plans for patients, which may include outpatient treatment or additional residential treatment. Assessment experience will include administering, scoring, and interpreting a psychological battery completed upon admission, which includes assessment of depression, anxiety, PTSD, anger, motivation, alcohol use, and drug use. Cognitive screening instruments (SLUMS) are often administered upon screening for the program and/or admission to assess baseline cognitive functioning. Additional opportunities for more in depth cognitive, personality and/or neuropsychological testing are available on a case by case basis.

Trainees in the SARRTP will gain experience in the following skills and activities:

1. Increased familiarity with evidence-based treatment for substance use disorders.

2. Facilitation of evidence-based group treatment for substance use disorders

3. Providing psycho-educational instruction regarding substance use and recovery

4. Exposure to psychological assessment:
   o Diagnostic interviewing
   o Personality assessment
   o Cognitive assessment
   o Integration of assessment results
   o Formulating written integrated summaries of results and recommendations to providers

5. Consultation with a multi-disciplinary team with regard to optimal patient care:
   o Attend weekly staff meetings
   o Participate in staffing patients to address problem behaviors
   o Consult with the outpatient addictions treatment program and the inpatient psychiatric unit regarding referrals to the SARRTP

7. **TBI/POLYTRAUMA PSYCHOLOGY OUTPATIENT CLINIC TRACK**

  **Supervisors:**
  
  Jonathan Hessinger, Psy.D.  
  Rene Pichler-Mowry, Ph.D., HSPP
Trainees will conduct psychotherapy and some assessment with Veterans being followed by the Edward Hines, Jr. VA Hospital's Traumatic Brain Injury (TBI)/Polytrauma Team. This track is designed for an advanced practicum trainee and/or a trainee who has a strong background in psychotherapy and medical rehabilitation. Due to working with the TBI population, trainees with an interest in neuropsychology have also been a good fit for this track. This is a 12 month 2 days per week track with Wednesdays being a mandatory day with hours 7:00am to 3:30pm (Not available on Thursdays).

The TBI/Polytrauma Team is an interdisciplinary team from the following disciplines: amputation specialists/prosthetists, blind rehabilitation, chaplaincy, neuropsychology, nursing, nurse educators, occupational therapy, physical therapy, physical medicine and rehabilitation, psychiatry, psychology, recreation therapy, social work, speech and language pathology, and vocational rehabilitation. As part of the Traumatic Brain Injury (TBI) /Polytrauma Psychology clinic, trainees will learn how to work as part of an interdisciplinary team dedicated to evaluating and treating individuals who have sustained multiple, and/or possibly life threatening combat related injuries including TBI, soft tissue damage, auditory and visual impairments, amputations, along with comorbid emotional and psychological difficulties (i.e., depression, Post Traumatic Stress Disorder [PTSD], adjustment reactions to civilian life post-deployment, substance use disorders). Therefore, a primary focus of the track includes the treatment of co-occurring mental health problems and medical rehabilitation. In addition, Veterans may present for help with adjustment to medical conditions, such as traumatic brain injury, amputation, spinal cord injury, sleep issues, and chronic pain. Treatment may be brief or long-term depending on the Veteran's presenting concerns, needs, goals, and progress in therapy.

Polytrauma and TBI Veterans are a diverse population from a multiple war conflicts. The TBI/Polytrauma clinic may also serve a number of active duty service members (most of who are currently in the reserves).

While on this track, trainees will regularly assess symptoms (e.g., depression, post-traumatic stress), risk, and provide individual psychotherapy services to Veterans, couples, and families, with the opportunity to integrate assessment data (e.g., personality tests, brief cognitive screens, information from neuropsychological and/or TBI evaluations) to guide their clinical decisions. Occasional opportunities to conduct group work are also available. Trainees will learn various manualized treatments such as Cognitive Processing Therapy (CPT), Prolonged Exposure (PE), and will also have the opportunity to use therapy modalities such as Acceptance & Commitment Therapy (ACT), Motivational Interviewing (MI), and Cognitive Behavioral Therapy (CBT) for depression, anxiety, substance use disorders, and/or chronic pain. Trainees also participate in the administration of the clinic, conduct psychological assessments (e.g., the Clinician-Administered PTSD Scale [CAPS]). Additionally, trainees in the TBI/Polytrauma Psychology clinic provide education and consultation regarding mental health issues to the TBI/Polytrauma staff, Veterans, and Veterans' family members. Trainees also typically participate in the Family
Empowerment Network (FEN), a smaller subset of the TBI/Polytrauma team members who design and provide supportive, educational programming for the adult supporters (e.g., family members, spouses) of Veterans. The members of the TBI/Polytrauma Psychology clinic also participate in interdisciplinary collaboration with TBI/Polytrauma treatment team members. Trainees are required to attend and participate in TBI/Polytrauma staffing and administrative meetings.

Staff in the TBI/Polytrauma Psychology clinic includes licensed clinical psychologists (Drs. Rene Pichler-Mowry & Jonathan Hessinger) as well as trainees at various levels of training (i.e., postdoctoral fellows, predoctoral interns, and predoctoral trainees). Psychology trainees will receive at least one hour per week of individual supervision from Dr. Pichler-Mowry. In addition to clinical supervision, trainees receive education about clinical topics in the following formats: TBI/Polytrauma Psychology (as scheduled) and Medical Rehabilitation Psychology (monthly) didactics (i.e., psychological assessment and intervention for chronic pain, Prolonged Exposure [PE], professional development, etc), Polytrauma Grand Rounds, Social Work inservice meetings, and Loyola University Medical Center Grand Rounds.

Psychology trainees will spend two days per week (16 hours/week) in the TBI/Polytrauma Psychology clinic, which is an outpatient clinic designed to serve the mental health needs of Polytrauma and TBI Veterans.

**Primary Goals:**
Trainees in the TBI/Polytrauma Psychology track will gain experience in the following skills and activities:

1. Increased exposure to various clinical phenomena, including TBI, PTSD, mood disorders, anxiety disorders, chronic pain, sleep difficulties, substance use disorders, physical injuries, risk factors (e.g., suicide, homicide, etc.) and other presenting problems.

2. Learn to administer and interpret various assessment instruments relevant to the common presenting problems of this population, including: The Clinician Administered PTSD Scale for DSM-5 (CAPS-5), PTSD Checklist (PCL), and Beck Depression Inventory-II (BDI-2).

3. Utilize supervision to help conceptualize presenting problems and select appropriate treatment goals and intervention strategies.

4. Learn how to flexibly apply empirically based intervention modalities, including: Cognitive Behavioral Therapy (CBT), Motivational Interviewing (MI), Cognitive Processing Therapy (CPT), Acceptance and Commitment Therapy (ACT), Behavioral Activation, Pain Management, and supportive therapy.

5. Learn to write succinct, clinically relevant notes.
6. Exposure to a consultant model of interacting with other disciplines.

7. Become comfortable and familiar with consultation within an interdisciplinary treatment team.

8. **TRAUMA SERVICES PROGRAM TRACK**

**Supervisors:**
- Jonathan Beyer, Ph.D.
- Kate Colangelo, Ph.D.
- Kurt Noblellt, Ph.D.
- Barbara Pamp, Ph.D.
- Dana Weber, Ph.D.

The Trauma Services Program provides education, assessment, and psychotherapy for Veterans who have experienced trauma and manifest trauma-related symptoms and/or problems with functioning. Veterans may have experienced all types of trauma, including but not limited to combat, sexual assault (MST, adult sexual assault, or child sexual assault), physical assault, and motor vehicle accident. Veterans may also be dually diagnosed with PTSD and substance use disorder(s). Patients include both men and women, representing all eras of service (e.g., Vietnam, Desert Storm, OEF/OIF/OND). The Trauma Services Program is a specialty program (previously referred to as the PTSD Clinical Team) whose primary mission is to treat Veterans coping with posttraumatic reactions.

Externship in the Trauma Services Program focuses on providing evidence-based treatments to Veterans coping with posttraumatic reactions. As such, the externship year is structured to afford comprehensive training in the theory and assessment of PTSD and in the treatment of PTSD and trauma-related sequelae via evidence-based therapies. For example, the trainee will be trained in assessment of trauma-related sequelae using various methods including but not limited to: structured interviews (e.g., CAPS), personality assessment (e.g., MMPI, PAI), and other relevant self-report assessments (e.g., PCL-5, PHQ-9).

Trainees will have the opportunity to learn evidence-based individual treatments, including Prolonged Exposure Therapy (PE) and Cognitive Processing Therapy (CPT). Trainees will also learn to facilitate our psychoeducation and orientation class, which is provided to all Veterans who enter the Trauma Services Program.

In select cases, a trainee may complete an assessment-focused experience with correspondingly less emphasis on providing individual therapy and increased focus on developing assessment skills. Trainees interested in this option will likely have minimal previous therapy experience.

Trainees in the Trauma Services Program practicum can expect to be an integral part of the program, which currently consists of seven psychologists, one social worker, and one part-time psychiatrist. The program works in close connection
with the Mental Health clinic, as well as with the rest of the Mental Health Service Line. All staff and trainees attend weekly staffing/business meetings. Note: Thursday is a mandatory day for all TSP trainees during which cases are presented and assigned and relevant administrative information is disseminated. In addition, all staff and trainees attend weekly Consultation (also on Thursdays), which affords further training and consultation in the implementation of evidence-based practice through case presentation and discussion, as well as the exploration of relevant research literature. In select cases, trainees may participate in small archival data research projects with an eye toward presenting a poster or paper at a conference. In all cases, trainees will learn by engaging in tasks that increase in intensity, complexity, and difficulty over time, and by observing and interacting with other psychologists. It is expected that trainees will engage in clinical work that is grounded in theory and research, and shaped by reflection on its every aspect.

In sum, trainees participating in the Trauma Services Program will gain experience in the following skills and activities:

1. Develop accurate assessment and diagnostic skills based on objective assessment and interview.
   - Develop the ability to select and administer appropriate assessment measures (e.g., PAI, CAPS, MMPI, PCL) specific to the patient’s needs.
   - Develop the ability to review patient records and integrate information from diagnostic interview into integrated reports.

2. Exhibit competence in the administration of psychoeducation courses for patients with PTSD and other trauma-related sequelae.
   - Co-facilitate our psychoeducation and orientation class, called CORE.

3. Exhibit competence in providing evidence-based therapies for PTSD and associated problems
   - Participate in trainings for EBTs
   - Treat at least five individual patients using either CPT or PE.

4. Provide consultation with the Trauma Services Program treatment team and other staff members who provide multidisciplinary care to the patients.

5. Attend weekly TSP staffing meetings with Trauma Services Program treatment team.

6. Attend weekly consultation meetings with Trauma Service Program treatment team.
DIRECTIONS

Hines VA Hospital is easily accessible by car, and by public transportation.

BY CAR:

Hines Hospital is in Chicago's western suburbs, at Fifth Avenue and Roosevelt Road, adjacent to the towns of Maywood and Broadview.

From the North or South:

Take 1-294 (Tri-State Tollway) - to 1-290 (Eisenhower Expressway). East on 1-290 (Chicago) - to First Avenue exit (Exit #20). Turn right (South) on First Avenue - to Roosevelt Road (Route 38). Turn right (West) on Roosevelt - go to Fifth Avenue (the first stop light). Turn left to enter the Hines Hospital grounds.

From the Far Western suburbs:

Take 1-88 - to 1-290 East on 1-290 - to Exit #20 Follow directions above from Exit #20.

From Downtown Chicago:

Take 1-290 (West) - to Exit #20 Turn left (South) on First Avenue. Follow directions above from Exit #20.

BY PUBLIC TRANSPORTATION:

The closest El stop is the Forest Park station, which is the end of the Blue Line. From there, you can take a bus to Hines VA Hospital, including the 308 line. Please check with the CTA/Pace for other bus lines and routing information to the hospital.

ONCE YOU ARE ON THE HINES CAMPUS:

Psychology Service offices are in Building 228 (Mental Health Building) and visitor parking is available in the parking lots directly east of Building 228 (Visitor Parking Lot E). Once you are in the lobby area of building 228, take the elevators to the 3rd floor and look for signs to 3South and Psychology Offices. You can wait in our waiting room, which is Room 3035.
